

Aprehend is available only to licensed pest professionals. For treatment, contact your preferred Aprehend Bed Bug Control Professional

Effective control of existing infestations

Aprehend eradicates existing bed bug infestations. Unlike chemicals, Aprehend usually requires only one application to provide long-term control and protection with minimal preparation or disruption to homeowner.

Ideal for preventing infestations

Used as a quarterly treatment, Aprehend will prevent the establishment of infestations. Bed bugs are attracted to the sleeping area and will attempt to establish colonies close to the source of a blood meal.

Strategic application of Aprehend around the rear perimeter of the headboard, base of the box spring bed skirt, and rear perimeter of night stands and picture frames will prevent the establishment of a bed bug colony. Quarterly reapplication will ensure year-round protection from bed bugs.

ConidioTec
Natural Urban Pest Control

Aprehend is a revolutionary biopesticide for the elimination and prevention of bed bugs.

- Results in days, up to 3-month residual
- Minimal resident preparation required
- Biopesticide with a non-toxic mode of action
- No chemicals, no odor, no dilution
- Can be used as a stand-alone treatment or as part of any protocol
- Avoid repeat visits
- EPA-registered and registered for use in all 50 states and Canada
- Ideal for use as a proactive bed bug treatment

EPA-registered biopesticide with a non-toxic mode of action.

Aprehend® is an effective, ready-to-use formulation containing the spores of a fungal disease that is deadly to bed bugs.

Aprehend®
Biological Bed Bug Control

How it works

When a bed bug comes into contact with an Aprehend-treated surface, the fungal spores stick to its feet and body and are taken back to its harborage. The spores transfer easily between bed bugs by direct contact, targeting bed bugs that do not leave the harborage.

After 24 hours, spores on the bed bug will germinate, like seeds, and penetrate directly through the cuticle of the bed bug. Once inside, the fungal disease grows in the blood system, killing the bed bug within 3-7 days.

Strategic application

Aprehend is applied in narrow (2-inch) barriers in the areas where bed bugs will walk. The spray barrier has up-to-three-months residual activity.

Also ideal for use after heat treatment

A single bed bug can avoid lethal temperatures and go on to re-establish an infestation. Application of Aprehend after heat treatments will prevent re-establishment by survivors.

Key Advantages

- Minimal resident preparation required
- Up to 3-month residual allows for its use as a **proactive treatment**
- Tackles even the most severe infestations
- Can be used as a stand-alone treatment or as part of any protocol
- Kills nymphs and adults
- Proven effective in multi-family housing, senior living facilities, shelters, campgrounds, hotels, and single family homes

Bed bugs do the work!

Fungal spores stick to the legs and body and are taken back to the harborage.
