

Keys to a Successful Bed Bug Treatment

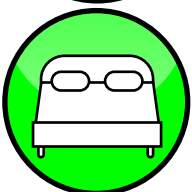

Tidy Up - Before the treatment, tidy up your home, sweep, mop, vacuum and organize your home in such a way that it will be easy for us to conduct treatment. We will be moving furniture around, and a safe organized working environment will improve the results.

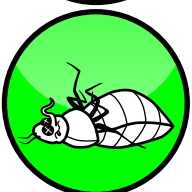

Wait to re-enter - This allows the aerosol droplets to settle and for the Aprehend barriers to dry. You and your pets will be out of the house for the duration of the treatment, and an additional 2 hours after completion for product to dry.

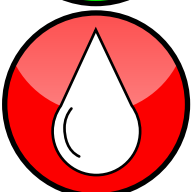

Regularly launder all bedding - Wash all sheets and pillowcases and dry at high heat for 30-40 minutes. Run comforters and pillows through dryer at high heat for 30-40 minutes. We will bag items during our treatment; anything that has been placed in bags should be put through laundry.

Maintain normal sleeping routines and locations - Otherwise, bed bugs will remain dormant in your absence and may not cross an Aprehend barrier.

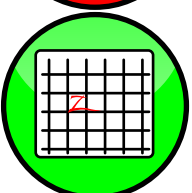

Expect wandering behavior - Prior to death, bed bugs emerge at odd times of day and in plain view. This usually will occur 4-7 days after treatment and may recur as different stages of their life cycle emerge.

DO NOT expose Aprehend to liquids - This will render Aprehend completely ineffective. Avoid washing/cleaning areas where treatment was conducted, this highlights why step one is so important to do these cleaning routines prior to treatment.

DO NOT apply chemicals on the same surface as Aprehend - This includes both cleaners and over the counter pesticides.

Be Patient - You'll see significant knockdown in 4-7 days but they may emerge from different life cycle stages after that. Don't be alarmed: Aprehend barriers will keep working for up to 3 months.

For best results these guidelines must be followed.
